

Exercise "Cowboy"

More than 100 Starfighter, which was almost one tenth of the overall German fleet, were stationed at Luke AFB, Arizona at the end of the nineteen-sixties. It had to be evaluated if a ferry of the aircraft in times of tension was possible from the United States to Germany without major problems. Preparations for exercise "Cowboy" started after an appropriate order had been given by the Chief of the Air Staff. A long range navigation flight from Germany to Luke AFB and back was planned for the period of 1st September until 11th September 1969.

In addition, the Air Force regarded the whole operation as a good will tour to further enhance the good relationship and co-operation between friendly Air Forces and nations. It was decided to operate with a group of six RF-104G's supported by engineering staff and escorted by two transport aircraft: a C-160 Transall and a Breguet Atlantic would either fly ahead or follow the F-104 formation. The internal fuel tanks of the RF-104G's had a higher fuel capacity of 700 lbs compared with the standard F-104, which gave an extended range.

The officer in command of the exercise was the Kommodore of Jagdbombergeschwader 33, Oberst Kurt Stöcker. The following additional F-104 pilots were assigned to fly with him: Major Josef Herbst of Waffenschule 10, Major Reinhard Rokoss of Jagdbombergeschwader 36, Hauptmann Jürgen Berger of Jagdbombergeschwader 31 "Boelcke", Hauptmann Siegfried Schöllhorn of Jagdbombergeschwader 32 and Hauptmann Klaus Richard of Jagdbombergeschwader 34.

After intensive briefings about navigation, routing, weather conditions and Search and Rescue operations the Commanding Officer of the German Tactical Air Command, Generalmajor Diether Hrabak, said goodbye to the formation on September 1st. Three two-ship flights took off with ten minutes intervals. After a refueling stop at Lossiemouth, Scotland the first night stop was made at Keflavik, Iceland. On September 2nd the aircraft continued to Goose Bay, Canada via Sonderstroem, Greenland.

On the next day (September 3rd) United States airspace was entered. Following an intermediate stop at Selfridge AFB, Michigan after a flight of approximately 1,300 nautical miles from Goose Bay the final destination of the day was McConnell AFB, Kansas. The team was welcomed on American soil enthusiastically by the McConnell host unit.

After three days filled with social events and relaxation the flights back to Germany followed the same route. The whole contingent arrived back at Jever Air Base during the afternoon of 11th September. The Chief of the Air Staff, Generalleutnant Johannes Steinhoff, welcomed the returning pilots and supporting soldiers.

The operation had been an overall success to an unexpected degree as the six RF-104G had flown during the whole long range navigation exercise without major difficulties or problems.

The exercise proved that a quick and safe return of the Luke Starfighter to Germany by ferry flights was possible if the need should arise.

Starfighter used: 24+04, 24+12, 24+23 (lead), 24+35, 24+78, 23+93.
